

Wie bekomme ich Hilfe?

Jan-Philipp Kolb

15 Oktober 2018

Wie bekomme ich Hilfe?

- Um Hilfe im Allgemeinen zu bekommen:

```
help.start()
```

- Online-Dokumentation für die meisten Funktionen:

```
help(name)
```

- Benutze ?, um Hilfe zu bekommen

```
?mean
```

- `example(lm)` liefert ein Beispiel für die lineare Regression

```
example(lm)
```

Vignetten

- Eine Vignette ist ein Papier, das die wichtigsten Funktionen eines Pakets darstellt.
- Sie enthalten viele reproduzierbare Beispiele.
- Vignetten sind ein neues Werkzeug, deshalb hat nicht jedes Paket eine Vignette.

```
browseVignettes()
```

- Um eine Vignette zu bekommen:

```
vignette("osmdata")
```

Ein Beispiel für eine Vignette - Das Paket `osmdata`

<https://cran.r-project.org/web/packages/osmdata/vignettes/osmdata.html>

1. Introduction

`osmdata` is an R package for downloading and using data from OpenStreetMap ([OSM](#)). OSM is a global open access mapping project, which is free and open under the [ODbL licence](#) [[@OpenStreetMap](#)]. This has many benefits, ensuring transparent data provenance and ownership, enabling real-time evolution of the database and, by allowing anyone to contribute, encouraging democratic decision making and citizen science [[@johnson_models_2017](#)]. See the [OSM wiki](#) to find out how to contribute to the world's open geographical data commons.

Unlike the [OpenStreetMap](#) package, which facilitates the download of raster tiles, `osmdata` provides access to the vector data underlying OSM.

`osmdata` can be installed from CRAN with

```
install.packages("osmdata")
```

and then loaded in the usual way:

```
library(osmdata)
```

```
## Data (c) OpenStreetMap contributors, ODbL 1.0. http://www.openstreetmap.org/copyright
```

The development version of `osmdata` can be installed with the `devtools` package using the following command:

```
devtools::install_github('osmdatar/osmdata')
```

Demos

- für manche Pakete gibt es Demos:

```
demo() # zeigt alle verfügbaren Demos
demo(package = "httr") # Zeigt alle Demos in einem Paket

# Ein spezifisches Demo laufen lassen:
demo("oauth1-twitter", package = "httr")
```

- Wenn ein Demo gestartet wird, ist der zugehörige Code in der Konsole sichtbar

```
demo(nlm)
```

```
> demo(nlm)
```

```
demo(nlm)
```

Die Funktion apropos

- durchsucht alles über den angegebenen String:

```
apropos("lm")
```

```
## [1] ".colMeans"      ".lm.fit"         "colMeans"
## [4] "confint.lm"      "contr.helmert"   "dummy.coef.lm"
## [7] "getAllMethods"   "glm"             "glm.control"
## [10] "glm.fit"         "KalmanForecast"  "KalmanLike"
## [13] "KalmanRun"       "KalmanSmooth"    "kappa.lm"
## [16] "lm"             "lm.fit"          "lm.influence"
## [19] "lm.wfit"        "model.matrix.lm" "nlm"
## [22] "nlminb"         "predict.glm"     "predict.lm"
## [25] "residuals.glm"   "residuals.lm"    "summary.glm"
## [28] "summary.lm"
```

- Funktion kann auch mit **regulären Ausdrücken** verwendet werden...

Suchmaschine für die R-Seite

```
RSiteSearch("glm")
```

R Site Search

Ein Schummelzettel für Basis R

<https://www.rstudio.com/resources/cheatsheets/>

Base R Cheat Sheet

Getting Help

Accessing the help files

?mean

Get help of a particular function.

help.search('weighted mean')

Search the help files for a word or phrase.

help(package = 'dplyr')

Find help for a package.

More about an object

str(iris)

Get a summary of an object's structure.

class(iris)

Find the class an object belongs to.

Using Packages

install.packages('dplyr')

Download and install a package from CRAN.

library(dplyr)

Load the package into the session, making all its functions available to use.

dplyr::select

Use a particular function from a package.

data(iris)

Load a built-in dataset into the environment.

Vectors

Creating Vectors

<code>c(2, 4, 6)</code>	<code>2 4 6</code>	Join elements into a vector
<code>2:6</code>	<code>2 3 4 5 6</code>	An integer sequence
<code>seq(2, 3, by=0.5)</code>	<code>2.0 2.5 3.0</code>	A complex sequence
<code>rep(1:2, times=3)</code>	<code>1 2 1 2 1 2</code>	Repeat a vector
<code>rep(1:2, each=3)</code>	<code>1 1 1 2 2 2</code>	Repeat elements of a vector

Vector Functions

sort(x)	rev(x)
Return x sorted.	Return x reversed.
table(x)	unique(x)
See counts of values.	See unique values.

Selecting Vector Elements

By Position

<code>x[4]</code>	The fourth element.
<code>x[-4]</code>	All but the fourth.
<code>x[2:4]</code>	Elements two to four.
<code>x[-(2:4)]</code>	All elements except two to four.
<code>x[c(1, 5)]</code>	Elements one and five.

Programming

For Loop

```
for (variable in sequence){  
  Do something  
}
```

Example

```
for (i in 1:4){  
  j <- i + 10  
  print(j)  
}
```

While Loop

```
while (condition){  
  Do something  
}
```

Example

```
while (i < 5){  
  print(i)  
  i <- i + 1  
}
```

If Statements

```
if (condition){  
  Do something  
} else {  
  Do something different  
}
```

Example

```
if (i > 3){  
  print('Yes')  
} else {  
  print('No')  
}
```

Functions

```
function_name <- function(var){  
  Do something  
  return(new_variable)  
}
```

Example

```
square <- function(x){  
  squared <- x*x  
  return(squared)  
}
```

Reading and Writing Data

Also see the **readr** package.

Input	Output	Description
<code>df <- read.table('file.txt')</code>	<code>write.table(df, 'file.txt')</code>	Read and write a delimited text file.

Getting Help

Once R is installed, there is a comprehensive built-in help system. At the program's command prompt you can use any of the following:

```
help.start()  # general help
help(foo)     # help about function foo
?foo         # same thing
apropos("foo") # list all functions containing string foo
example(foo)  # show an example of function foo
```

Getting Help with R

Helping Yourself

Before asking others for help, it's generally a good idea for you to try to help yourself. R includes extensive facilities for accessing documentation and searching for help. There are also specialized search engines for accessing information about R on the internet, and general internet search engines can also prove useful ([see below](#)).

- Eine Liste mit HowTo's
- Eine Liste mit den wichtigsten R-Befehlen

Aufgabe A2A Hilfe bekommen

LABORATORY FOR APPLIED STATISTICS: Intro to R - Exercises für diese Aufgabe

- Versuchen Sie den Befehl `?which.min`. Dies öffnet eine Hilfeseite im unteren rechten Fenster von RStudio. Was macht die Funktion?
- Sie müssen den Namen der Funktion kennen, um die Hilfeseite wie oben beschrieben zu öffnen. Manchmal (oft, sogar) kennen Sie den Namen der R-Funktionen nicht; dann kann Ihnen eine **Suchmaschine** helfen. Versuchen Sie zum Beispiel, den Text `R minimum vector` zu suchen.
